

<p>The Challenge</p>	<p>All Energy Solar was growing fast, with a large number of installations scheduled - all their existing crews could handle, maybe more.</p> <p>Effective Learning for Growth took their documentation for all field installation procedures and turned it into a tool the installation supervisors can use on their tablet computers.</p>
<p>Solution Milestones</p>	<p>Using XSOL software, Effective Learning for Growth</p> <ul style="list-style-type: none"> • Translated the procedures from words to a graphic map for each facet of the installation • In 3 meetings with key stakeholders, confirmed the process, captured rules & best practices, and got clear agreement on how it's supposed to work • Embedded links to key documents into the HTML map so supervisors in field can fill-in applications, specs, and measurements to upload for processing near real-time • Delivered and confirmed operation of HTML file and Word file (for updates as processes change)
<p>Results / Outcomes</p>	<p>Installation crews have greater consistency, faster compliance with technical & administrative requirements – so customers get rebates faster and the company keeps growing.</p>
